

Michael Odling
Head of rail North, Mace

As Mace's head of rail in the North, Michael leads the growth of Mace's infrastructure business, supporting clients in the development and delivery of major infrastructure projects.

Michael has been a proud supporter of the development of North West infrastructure projects over many years, having worked on a number of high profile industry projects. These include the £560m Northern Hub project to reduce rail journey times between northern cities by removing the bottleneck around Manchester. More recently Michael has been supporting Transport for Greater Manchester in the development of its 'Case for Change' as it seeks to take control of and increase investment in the 97 train stations across Greater Manchester.

Originally coming from a contracting background and with experience of implementing lean processes into manufacturing businesses, Michael has brought a pragmatic approach to the consulting environment. He looks to challenge standard conventions to test whether there is the opportunity to generate wider benefits by doing something differently.
